

Marine red drum, *Sciaenops ocellatus*, is commonly known as redfish or spottail sea bass. It is a game fish native to the Atlantic Ocean and Gulf of Mexico and is found in coastal waters from Massachusetts to Tuxpan, Mexico. Red drum travel in shoals (schools) and are aggressive eaters, feeding on shrimp and small fish such as menhaden and mullet, at times in waters so shallow that their backs are exposed.

A stunningly beautiful, torpedo-shaped fish, red drum is more copper than red, with copper tipped fins and large copper scales along a broad back. It's most distinctive feature is one or more large black spots on the tail. Scientists believe that the spot may trick predators into targeting the tail rather than the head, allowing the fish a chance to escape.

GOOD GROWING

Copper Shoals Red Drum® are bred and hatched on two family owned and operated inland farms located between Port O'Connor and Palacios, Texas. Fingerlings mature in earthen ponds filled with saltwater sourced from the Matagorda Bay system and saline aquifers. Water quality is monitored around the clock to maintain the healthy growing environment that produces our premium fish. Predators and voracious eaters, Copper Shoals Red Drum® thrive on a high-quality, high-protein diet composed of grains, vitamins, minerals, and fish protein from well-managed fisheries. ***Copper Shoals Red Drum® contains no hormones, no antibiotics, and no mercury or other pollutants.***
